

LIVE EVENT TRACKING · BRING YOUR OWN BEACON

Every tracker on **one live map** — built for this decade.

Waypoint puts every entrant's satellite beacon on a single, fast, satellite-first map — with a recovery feed your safety team will actually use. Riders bring the Garmin inReach, SPOT and ZOLEO devices they already own; you run the whole event from one dashboard.

WHY ORGANIZERS CHOOSE WAYPOINT

A map built this decade

Fast and satellite-first. Measure distance and heading, and tap any rider for coordinates in every format your crew needs.

Bring your own beacon

Garmin inReach, SPOT and ZOLEO your riders already carry — no hardware to rent, no per-unit fees. Bivy Stick and phone-as-beacon coming.

Recovery-grade, not hobby-grade

A private Google Earth Pro feed with per-person access that's logged and expires with the event. Responder-only ICE cards, never public.

Your event, your brand

White-label the public map and embed it on your own site. "Powered by Waypoint" — not plastered by it.

Live in minutes

Load your whole roster from one spreadsheet. Riders never need an account. You're tracking the same day.

Pricing that respects you

Free group rides, one flat per-event fee, or let riders pay at join. No forced per-rider subscription to appear on your map.

WAYPOINT VS. THE LEGACY TRACKERS

	WAYPOINT	LEGACY TRACKERS
The interface	✓ Modern, fast, mobile-ready	Built 15+ years ago — and it shows
Distance + heading, multi-format coords	✓ Built in, one tap	Rare or limited
Private Google Earth Pro recovery feed	✓ Logged, expires with event	No, or manual exports
Responder-only emergency / ICE cards	✓ Never shown to spectators	Not built in
White-label + website embed	✓ Your logo, your site	Little to none
Roster from one spreadsheet	✓ No rider accounts needed	Manual, per rider
Pricing	✓ Free / flat per-event / entrant-paid	Forced per-rider subscriptions or quote-only

Put your whole field on the map.

Rally · gravel & ultra-endurance · overland · sailing · SAR · production. Built by people who've run the race and the recovery — not just the server.
